

Oceanport

The Two Rivers Water Reclamation Authority (TRWRA) is working in conjunction with Hazen and Sawyer and Schiavone Construction Co. LLC (Schiavone) to replace TRWRA's aging Pleasure Bay Interceptor and Main Pump Station in Monmouth Beach.

We are anticipating the following schedule for the work through February:

- Currently underway – Schiavone is currently mobilizing their equipment to the site and has started construction on the security fencing for the site. Due to construction activities at the TRWRA Plant in Monmouth Beach, Oceanport may also experience minor traffic impacts from the transportation of excavated material and the delivery of concrete.
- Throughout February 2024 – Schiavone will continue to mobilize to the Oceanport jobsite. This will include the delivery of construction equipment and materials and the installation of construction fencing. Later in the month, Schiavone will begin installation of tracking pad and begin tree removals. Construction will also involve the relocation of a storm sewer that is onsite.

Status of Sommers Park in Oceanport

Impacts will occur during working hours as the Contractor will begin construction activities in Sommers Park. As mobilization begins, minor roadway impacts will occur due to the delivery of construction equipment and materials. Any impacts to the local traffic patterns will be coordinated with the local police department and authorities to ensure the safe maintenance of traffic in the affected areas.

We will continue to provide monthly updates throughout the project and any upcoming impacts that may be anticipated to the local communities.
