

## **Oceanport**

The Two Rivers Water Reclamation Authority (TRWRA) is working in conjunction with Hazen and Sawyer and Schiavone Construction Co. LLC (Schiavone) to replace TRWRA's aging Pleasure Bay Interceptor and Main Pump Station in Monmouth Beach.

We are anticipating the following schedule for the work through January:

- Currently underway – No work currently underway within Sommers Park. Due to construction activities at the TRWRA Plant in Monmouth Beach, Oceanport may experience minor traffic impacts from the transportation of excavated material and the delivery of concrete.
- Throughout January 2024 – Schiavone to begin work at Sommers Park with minor mobilization activities towards the end of the January. This will include the delivery of construction equipment and materials and the installation of construction fencing.

**Status of Sommers Park in Oceanport**

Impacts will occur during working hours as the Contractor will begin construction activities in Sommers Park. As mobilization begins, minor roadway impacts will occur due to the delivery of construction equipment and materials. Any impacts to the local traffic patterns will be coordinated with the local police department and authorities to ensure the safe maintenance of traffic in the affected areas.

We will continue to provide monthly updates throughout the project and any upcoming impacts that may be anticipated to the local communities.
